

To Whom It May Concern:I recently purchased satellite radio because of the variety and quality of service available. I am truly amazed at the technology and the awesome potential it has to entertain and empower my life. I am equally astounded by the fact that there are organizations that want to limit my ability to access that information that I pay to receive.

Please allow the free market system to work. To do anything else would be an injustice to all the other products in our country's history that went by the wayside when something better was developed.

Allow the free market to determine which technology stays and which goes. The free market determination has been good enough up to now. The car won out over the horse. The compact disc won out over the 8 track. Airplane over the train. The government did not force us to use the 8 track or the train or the horse. We decided that.

Please allow the system to work. Allow us, the ones that spend our money on what we want, to determine where we want to get our information.

Thank you.
